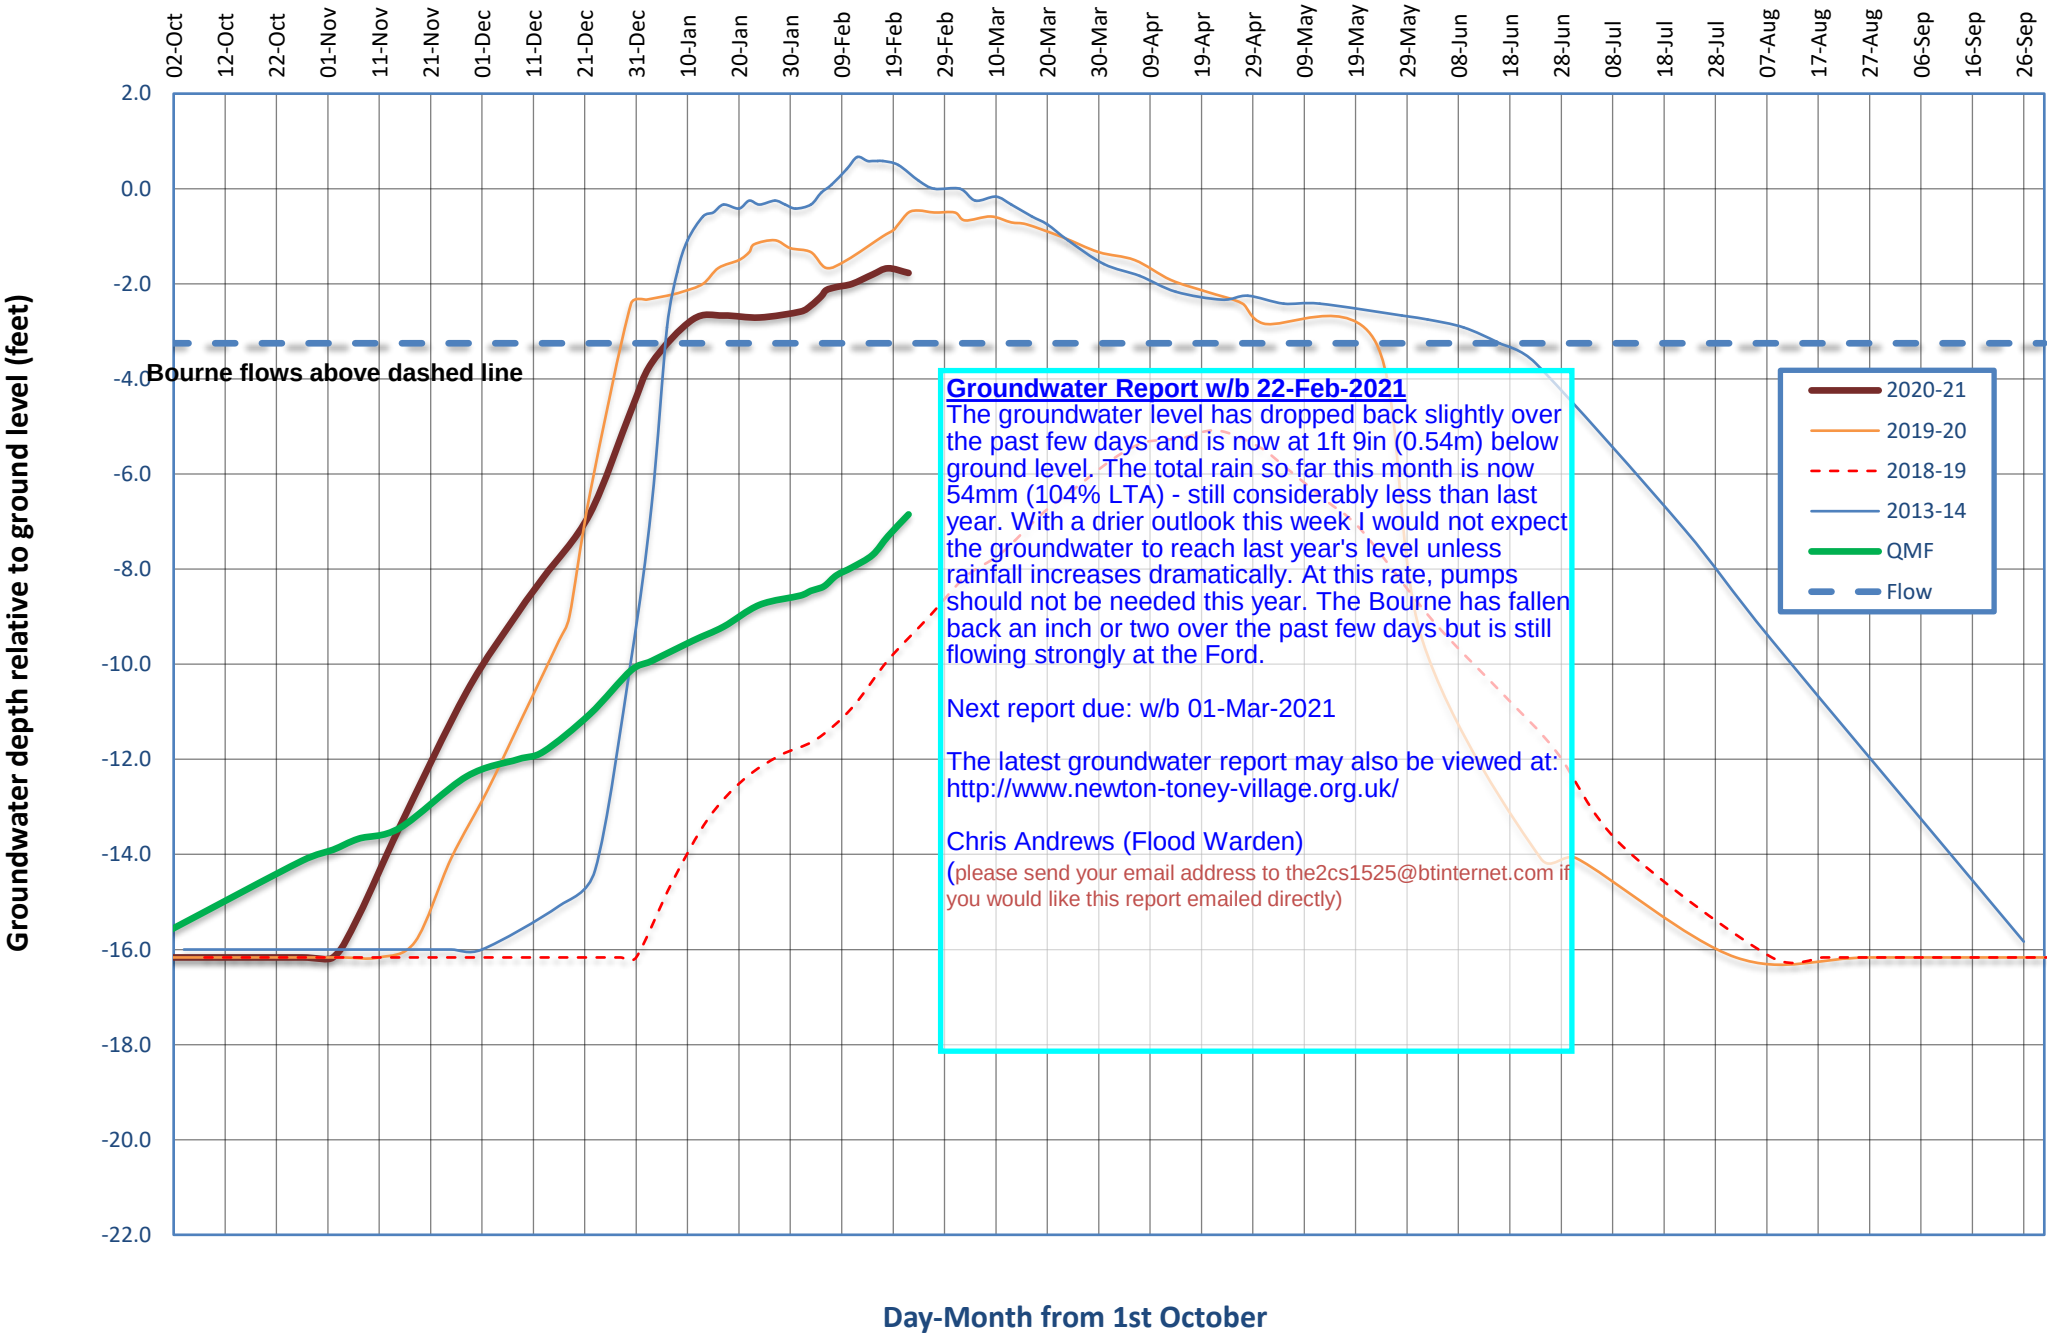
Newton Toney Groundwater Level
2020-21



Groundwater Report w/b 22-Feb-2021

The groundwater level has dropped back slightly over the past few days and is now at 1ft 9in (0.54m) below ground level. The total rain so far this month is now 54mm (104% LTA) - still considerably less than last year. With a drier outlook this week I would not expect the groundwater to reach last year's level unless rainfall increases dramatically. At this rate, pumps should not be needed this year. The Bourne has fallen back an inch or two over the past few days but is still flowing strongly at the Ford.

Next report due: w/b 01-Mar-2021
